

Functional & Performance Testing

Model Performance Test

Project Name : FitBuddy

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Text Input Validation (e.g., user name, goal details)	Enter valid and invalid text in input fields	Valid inputs accepted, errors for invalid inputs	Valid inputs accepted and proper error displayed	Pass
FT-02	Number Input Validation (e.g., age, height, weight, target calories)	Enter numbers within and outside the valid range	Accepts valid values, shows error for out-of-range	Out-of-range inputs blocked with alert	Pass
FT-03	Content Generation (e.g., personalized diet plan, exercise routine)	Provide complete inputs and click "Generate Plan"	Correct content is generated based on input	Plan generated accurately according to health stats	Pass
FT-04	API Connection Check	Check if API key is correct and recommendation engine responds	API responds successfully	API connected and responded in real-time	Pass
PT-01	Response Time Test	Use a timer to check diet and workout plan generation time	Should be under 3 seconds	Generated in 1.8 seconds	Pass
PT-02	API Speed Test	Send multiple API requests at the same time	API should not slow down	Handled concurrent requests smoothly	Pass
PT-03	File Upload Load Test (e.g., fitness log files, health PDFs)	Upload multiple health files and check processing	Should work smoothly without crashing	Uploaded and parsed without lag or errors	Pass
